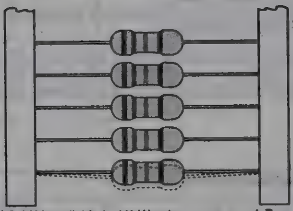
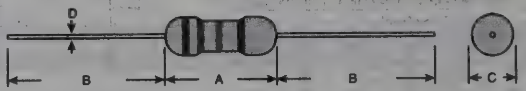
XICON 5% Carbon Film Resistors - 1/8, 1/4, 1/2W and 1 Watt





W.V. = $\sqrt{P * R}$
W.V. = Working Voltage DC
P = Power (rated in watts)
R = Resistance (rated in ohms)

Actual working voltage is the lower of either the value calculated from the above formula or the value listed in the chart.

- Low cost
- Use instead of carbon composition in low pulse applications
- Epoxy coated for environmental protection

RoHS Compliant

- Transfer molding process insures a good humidity seal and permanent compression fit of the concentric resistive element.

Heat Dissipation:

While the use of proprietary heat sinks with lower thermal resistance is acceptable, uprating is not recommended. For maximum heat transfer it is recommended that a heat sink compound be applied between the resistor base and heat sink/chassis mounting surface. It is essential that the maximum hot spot temperature of 200°C is not exceeded and therefore the resistor must be mounted on a heat sink of correct thermal resistance for the power being dissipated.

Maximum Overload:

Please consult the factory for assistance concerning your particular overload application.

MP SERIES

Non-Inductive, Heat Sink Mount TO-126, TO-220, and TO-247 Packages

Features:

- Non-Inductive Design, Ideal for Power Switching Circuits, Snubbers, RF Applications: 50Ω performance up to 500 MHz.
- Values as low as 0.005Ω ideal for Current Sensing in Power Supplies, Motor Controls, and Battery Charging Circuits
- Resistor Element Electrically Isolated from the Ceramic Heat Dissipating Mounting Surface (1500 V ACrms)
- 1% Tolerance for most resistance values

*** Power Ratings are based on +25°C Case Temp.:**

The case temp. is used to establish the max. applied power, see Derating Curve. The case temp. measurement is made with a thermocouple contacting the bottom mounting surface of the package (center of heat dissipating ceramic), the device mounted on the heat sink with thermal grease. See Mounting Note.

Without a Heat Sink:

When in free air at +25°C the MP Series have
the following power ratings:
MP915: 1.25 W MP916, MP925, MP930: 2.25 W
MP2060: 2.5 W MP9100: 3.5 W

Mounting Note:

Mount on a smooth, clean, and flat heat sink surface with a thermal interface material such as thermal grease. The entire exposed ceramic area must be in contact with the heat sink. For additional technical information please refer to the Caddock Applications Notes for the MP Series available online at www.caddock.com.

Screw Mounting:

The use of a compression washer (Belleville type) is recommended. The compression washer must provide a force of 150 to 300 lbs. Recommended mounting torque is 6 in-lbs. Maximum mounting torque to avoid damage to the package is 8 in-lbs.

Clip Mounting:

Recommended Clip Force is 8 to 35 lbs applied to the center of the package. The clip should be smooth to avoid any point concentrations of pressure.

CADDOCK Power Film Resistors

CADDOCK

MP725 D-PACK STYLE

Features:

- Non-Inductive Design
- Values as Low as 0.020Ω
- Resistor Electrically Isolated from Heat Sink

Specifications:

- Power Rating: 25 W at +25°C Case Temp. (see Derating Note for Power Rating)
- Temp. Coeff. ΔR taken at +150°C, ref to +25°C
  0.50Ω to 1.00 KΩ: -20 to +80 ppm/°C
  0.050Ω to 0.49Ω: 0 to +200 ppm/°C
  0.020Ω to 0.049Ω: 0 to +300 ppm/°C

***Derating Note: The case temperature is to be used for purposes of establishing the maximum applied power. See Derating Curve.** The case temperature measurement is made on the metal mounting tab against the molded body. Derate appropriately for the ambient temperature range, the thermal resistance of the mounting surface, and the temperature limitations of the adjacent materials (such as glass epoxy). The Thermal Resistance (film to case) is 5.00°C/W. For additional technical information refer to the Applications Note at www.caddock.com. Power dissipation is 2.5 watts, at an ambient temperature of 25°C, when mounted on a standard pcb (ex. FR-4 or G-10) with double sided copper board (2 ounce) 1 inch X 1 inch X .063 inch (thick).

Soldering Note: The case temperature of the MP725 should not exceed +219°C during reflow soldering or any other soldering process. See the applications note at www.caddock.com for more information.

OHMITE 5% SMD Wirewound Power Resistors - 1, 1.5, 2 and 3.5 Watt

OHMITE.

RW SERIES

These low value surface mount power resistors are ideal for current sensing applications and reduce the amount of space required by traditional power resistors. They offer higher power levels than conventional chip resistors. The body is molded with UL94V0 material rated at 205°C continuous. Flexible J-bend terminations reduce solder joint breakage due to thermal expansion and vibration.

Ohmite Manufacturing's family of High Energy Wirewound Resistors employ special winding techniques to maximize the effective joule rating of each resistor. Ohmite High Energy Wirewounds are hand wound in order to maintain the tightest possible pitch (space between windings) and thereby maximize the mass of the resistive element.

OHMITE TAP 1000 SERIES

The TAP1000 series delivers 1000 watts of continuous power with thick film on alumina substrate technology. Up to 30% smaller, the TAP1000 is capable of 2 to 4 times the power dissipation of traditional heat sinkable resistor technologies. Designed for use with liquid cooled heat sinks, TAP1000 resistors are capable of dissipating 1000 watts of continuous power when properly mounted. Offering the highest power available in a heat sinkable package, the TAP1000 is well suited for power conditioning, power distribution, and power control applications.

- Dissipates 1000 Watts@70°C
- High Energy Rating
- Low Inductance

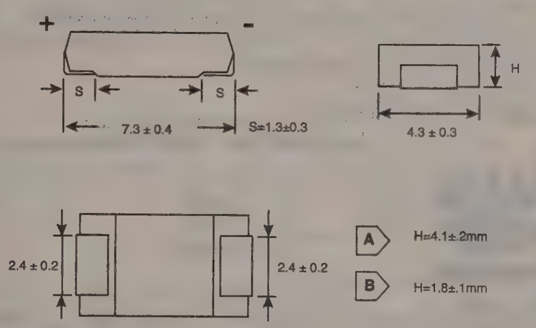
CDE CORNELL DUBILIER ULTRA LOW ESR 105°C SMD SOLID POLYMER ALUMINUM CAPACITORS

Solid polymer aluminum capacitors combine the high capacitance capability of an electrolytic component with the high frequency performance of film capacitors. When the need for low impedance at high frequency is critical for your design, one SPA chip is capable of replacing several liquid electrolyte aluminum or tantalum capacitors connected in parallel.

-Ideal for bypassing high frequency noise, and for switching frequency filtering in DC/DC conversion.

-The solid electrolyte delivers a typical expected operating life of more than 50 years.

DIMENSIONS: mm



Specifications:
- Operating temperature range: -55°C to +105°C
- Surge voltage: 125% of rated voltage
- Capacitance tolerance: ±20% @ 120Hz and +20°C
- DC leakage current: ≤4V; to I ≤ .06CV (μA)
  >4V; to I ≤ .04CV (μA) or 3μA

Applications:
- Motherboard By-Pass
- Switching supply input/output filters
- Power supply decoupling
- High frequency noise reduction
- Laptop LCD displays
- Automotive digital equipment
- Portable electronic equipment

Features:
- Ultra low E.S.R.
- High ripple current rating - up to 3.0 Amps
- Ultra stable - no change in imp. & e.s.r. from -55°C to +105°C
- Reduced parts count - replaces three or more tantalum caps
- Inherently more reliable, and ignition free

RoHS Compliant

KEMET 125°C Low ESR Aluminum Organic Capacitors - AO-CAP

The Capacitance Company
KEMET
CHARGED™

RoHS Compliant **This page of product is compliant.**

KEMET enters the world of aluminum capacitors with the introduction of the AO-CAP, designated the A700 Series, which has been targeted for power management applications. With aluminum as the anode material, aluminum oxide as the dielectric, and a conductive polymer to replace the wet electrolytic historically used in aluminum capacitors, KEMET has advanced beyond existing aluminum organic capacitors.
The KEMET A700 Series AO-CAP is also an ideal alternative to high-capacitance ceramics. Its outstanding high frequency performance helps reduce component counts, cost-effectively saving board space.

The KEMET AO-CAP is totally free of lead with excellent surge current performance and long-term reliability. There is no recommended de-rating of application voltage to reduce failure rate. The operating temperature is -55°C to +125°C.
The KEMET AO-CAP is offered in the same EIA industry standard case sizes and packaging formats as KEMET's tantalum surface-mount capacitor lines.

Features:

- Extremely low ESR
- High capacitance retention for superior performance at high operating frequencies
- Non-ignition Failure Mode
- No "dry-out" or "wear-out" related failure mechanism
- No voltage derating up to +125°C
- True Surface-mount capability
- Overall lower placement costs
- PB Free
- Self healing mechanism
- MSL3 Packaging

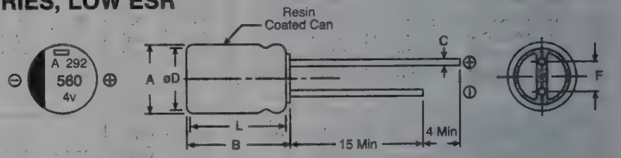
UCC PSA NPCAP™ 105°C RADIAL SOLID POLYMER ALUMINUM SERIES, LOW ESR

The PSA series uses a solid functional polymer as the electrolyte. This polymer technology insures more stable performance and higher reliability over the expected lifetime than normal liquid electrolyte capacitors. PSA capacitors are constructed of lead-free materials that can withstand high temperature lead-free soldering. This series are suitable for use in DC-DC converters, voltage regulators, and decoupling applications and are recommended replacements for OS-CON™ capacitors.



Specifications:

- Temperature range: -55°C to +105°C
- Voltage Range: 2.5 to 10VDC
- Capacitance Range: 27 to 470µF

Features:

- Capacitance Tolerance: ± 20%
- Rated Lifetime: 2000 hours

RoHS Compliant

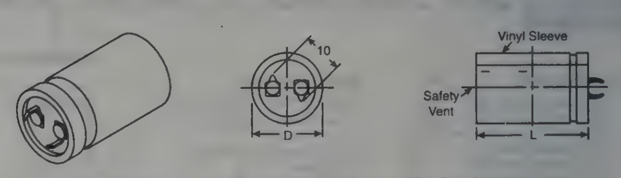
UNITED CHEMI-CON Aluminum Electrolytic Capacitors

RoHS Compliant This page of product is compliant.

KMH 105°C SNAP MOUNT HIGH CAPACITANCE SERIES

The KMH series are the standard 105°C, large capacitance, snap-in capacitors. The very high CV values and ripple current capabilities make these capacitors ideal for use in power supply filter circuits. The standard KMH capacitors are non-solvent proof and are not recommended when halogenated cleaning solvents are used.

Specifications:
- Operating Temperature range: -40°C to +105°C for 6.3 to 100VDC, -25°C to +105°C for 160 to 450VDC
- Rated Lifetime: 2,000 hours @ +105°C



Dimensions (D x L in mm) printed in BOLD in UCC Part Number

SMH 85°C SNAP MOUNT HIGH CAPACITANCE SERIES

The SMH series are the standard 85°C, large capacitance, snap-in capacitors. The very high CV values and ripple current capabilities make these capacitors ideal for use in power supply filter circuits The standard SMH capacitors are non-solvent proof and are not recommended when halogenated cleaning solvents are used.

Specifications:
- Operating Temperature range: -40°C to +85°C for 6.3 to 100VDC, -25°C to +85°C for 160 to 450VDC
- Rated Lifetime: 2,000 hours @ +85°C

For quantities 1000 and up, call for quote.

FY SERIES

The FY series includes small-size electric double-layer capacitors with excellent voltage holding characteristics. The FYD type occupies only a small area on a printed circuit board, and the FYH and FYL types feature a low profile in height, so that they can be used in various systems. These capacitors are ideal as long-time backup devices for minute-current loads in small and lightweight systems.

Features:
- Product variety makes the FYD, FYH, and FYL types suitable for use in many types of application systems.
- Excellent voltage holding characteristics ideal for backup of 1μA to several hundred μA.
- Smaller than other Super Capacitors (25% less than FS series in volume)
- Capacitance ranges from low to high (0.01F to 2.2F).

Applications:
- Backup of CMOS microcomputers, static RAMs, DTSs (digital tuning systems)

AVX Feedthru 0805/1206 Capacitors

RoHS Compliant **This page of product is compliant.**

W3F4 SERIES: 4 ELEMENT 1206 FEEDTHRU ARRAY

The Feedthru Capacitor Array contains four elements with a common ground connection. This makes them an ideal choice for Multi-line designs needing EMI suppression, broadband I/O filtering or Vcc power line conditioning. Additional benefits are reduced component count and PCB space savings. The unique construction provides low parallel inductance and offers excellent decoupling capability for all high di/dt environments. It provides significant noise reduction in digital circuits to <5 GHz.

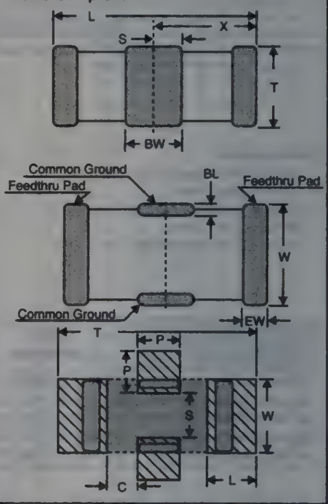
W2F/W3F Series FeedThru 0805/1206 Capacitors



AVX SMD LOW INDUCTANCE CAPACITORS IDC (INTERDIGITATED CAPACITORS)

General Description:

- Very low equivalent series inductance (ESL), high speed decoupling capacitor in 0612 and 0508 case size.
- Measured inductances of 60pH (for 0612) and 50pH (for 0508) are the lowest in the FR4 mountable device family.
- Opposing current flow creates opposing magnetic fields. This causes the fields to cancel, effectively reducing the equivalent series inductance.
- Perfect solution for decoupling high speed microprocessors by allowing the engineers to lower the power delivery inductance of the entire system through the use of eight vias.
- Overall reduction in decoupling components due to very low series inductance and high capacitance.

Specifications:

- Capacitance Tolerance: ±20% Preferred (10% Available)
- Operating Temperature Range: X7R= -55°C to +125°C, X5R= -55°C to +85°C
- Temperature Coefficient: ±15% (0VDC)
- Dissipation Factor: 4V, 6.3V = 6.5% max; 10V = 5.0% max; 16V = 3.5% max , or 1,000MΩ per μF min., whichever is less
- Dielectric Strength: No problems observed after 2.5 x RVDC for 5 seconds at 50mA max current
- CTE (ppm/C): 12.0

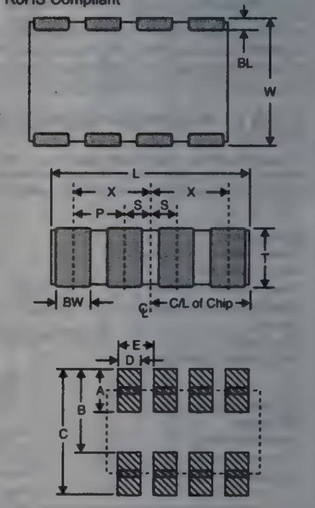
SMD Low Inductance Capacitors IDC (Interdigitated Capacitors)



AVX LOW INDUCTANCE LGA CAPACITORS

AVX has introduced a revolutionary new capacitor for low inductance LGA (land grid array) capacitors have virtually the equivalent high frequency performance of 8-terminal ICD's (Inter-Digitated Capacitors) but are built in a simplified 2 terminal package. This provide for lower manufacturing cost and easier handling and design. LGA are ideal for decoupling in semiconductor package-level and board-level applications.

AVX Corporation has supported the automotive industry requirements for multilayer ceramic capacitors consistently for more than 10 years. Products have been developed and tested specifically for automotive applications and all manufacturing facilities are QS9000 and VDA 6.4 approved

As part of AVX's sustained investment in capacity and state of the art technology, they are now transitioning from the established Pd/Ag electrode system to a Base Metal Electrode system (BME).

AVX is using AECQ200 as the qualification vehicle for this transition. A detailed qualification package is available on request and contains results on a range of part numbers including

- X7R dielectric components containing BME electrode and copper terminations with a Ni/Sn plated overcoat
- X7R dielectric components, BME electrode with epoxy finish for conductive glue mounting
- X7R dielectric components BME electrode and soft terminations with a Ni/Sn plated overcoat
- NP0 dielectric components containing Pd/Ag electrode and silver termination with a Ni/Sn plated overcoat

AVX Tip and Ring MLCC

A KYOCERA GROUP COMPANY

AVX "Tip & Ring" or "ring detector" Multilayer Ceramic Chip Capacitors are designed as a standard telecom filter to block -48 Volts DC telephone line voltage and pass subscriber's AC signal pulse (16 to 25Hz, 70 to 90Vrms).The typical ringing signal is seen on figure on page 84. The ringer capacitors replace large leaded film capacitors and are ideal for telecom/modem applications. Using AVX "Tip &Ring" capacitors not only saves valuable real estate on the board and reduces the weight of overall product, but also features standard surface mounting capabilities, so critical to new and compact designs.The AVX "Tip & Ring" capacitors are offered in standard EIA sizes and standard values. They offer excellent high frequency performance, low ESR and improved temperature performance over film capacitors.

AVX SMD FLEXITERM™ Ceramic Capacitors, Soft Termination

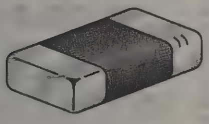
A KYOCERA GROUP COMPANY

RoHS Compliant **This page of product is compliant.**

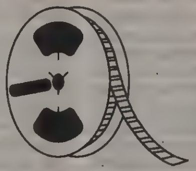
With increased requirements from the automotive industry for additional component robustness, AVX recognized the need to produce a MLCC with enhanced mechanical strength. It was noted that many components may be subject to severe flexing and vibration when used in various under the bonnet automotive applications.

To satisfy the requirement for enhanced mechanical strength, AVX had to find a way of ensuring that electrical integrity is maintained while external forces are being applied to the component. This soft termination is designed to enhance the mechanical flexure and temperature cycling performance of a standard ceramic capacitor with an X7R dielectric.

In addition to automotive applications, it also provides Design Engineers with a satisfactory solution when designing PCB's which may be subject to high levels for board flexure.



Dimensions:
Standard EIA Case



4000 Piece Reels

Product Advantages:

- High mechanical performance able to withstand, 5mm bend test guaranteed.
- Open failure mode is apparent when products are overstressed by 5mm.
- Increased temperature cycling performance, 3000 cycles and beyond.
- Flexible termination system.
- Reduction in circuit board flex failures.
- Base metal electrode system.
- Automotive or commercial grade products available.
- Temperature Range: -55°C to +125°C

The industry standard for flexure is 2 mm minimum with Soft Termination. AVX guarantees a minimum flexure of 5 mm, without any internal cracks. Beyond 5mm generally the component will open. The industry standard for temperature cycling is 1000 cycles, AVX guarantees 3000 cycles.

AEC-Q200 Qualifications:

- Created by the Automotive Electronics Council
- Specification defining stress test qualification for passive components

Applications:

High Flexure Stress Circuit Boards

- e.g. Depanelization: Components near edges of board.

Variable Temperature Applications

- Soft termination offers improved reliability performances in applications where there is temperature variation.
- e.g. All kind of engine sensors: Direct connection to battery rail.

Automotive Applications

- Improved reliability.
- Excellent mechanical performance and thermo-mechanical performance.

Testing:

Key test used to compare soft termination to AEC-QC200 qualification:

- Bend Test
- Temperature Cycle Test

RoHS Compliant

AVX ACCU-F® THIN-FILM RF / MICROWAVE CAPACITORS

Accu-F® meets the fast-growing demand for low-loss (high-Q) capacitors for use in surface mount technology especially for the mobile communications market, such as cellular radio of 450 and 900 MHz, UHF walkie-talkies, UHF cordless telephones to 2.3 GHz, low noise blocks at 11-12.5 GHz and for other VHF, UHF and microwave applications. Accu-F® is currently unique in its ability to offer very low capacitance values (0.1pF) and very tight capacitance tolerances (±0.05pF). Typically Accu-F® will be used in small signal applications in VCO's, matching networks, filters, etc. Inspection test and quality control procedures in accordance with ISO 9001, CECC, IECQ and USA MIL Standards yield products of the highest quality.

These porcelain and ceramic dielectric multilayer capacitor (MLC) chips are best suited for RF/Microwave applications typically ranging from 10MHz to 4.2GHz. Characteristic is a fine grained, high density, high purity dielectric material impervious to moisture with heavy internal palladium electrodes.

These characterics lend well to applications requiring:

Specifications:

- High current carrying capabilities
- High quality factors
- Very low equivalent series resistance
- Very high series resonance
- Excellent stability under stresses of changing voltage, frequency, time and temperature
- Temperature Coefficient: (M) +90 ±20PPM°C, (A) ±30PPM°C

HIGH VOLTAGE MLC CHIPS TIN/LEAD TERMINATION "B"

Larger physical sizes than normally encountered chips are used to make high voltage MLC chip product. Special precautions must be taken in applying these chips in surface mount assemblies. The temperature gradient during heating or cooling cycles should not exceed 4°C per second. The preheat temperature must be within 50°C of the peak temperature reached by the ceramic bodies through the soldering process. Chip sizes 1808 and larger should be reflow soldered only. Capacitors may require protective surface coating to prevent external arcing.

KEMET FT-CAP Flexible Termination MLCC

The Capacitance Company KEMET CHARGED.

RoHS Compliant This page of product is compliant.

FT-CAP FLEXIBLE TERMINATION MLCC

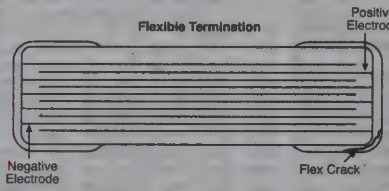
The FT-CAP is a surface mount multi-layer ceramic capacitor that incorporates a unique and flexible termination system. Integrated with KEMET's standard termination materials, a conductive epoxy is utilized between the conductive metallization and nickel barrier finish in order to establish pliability while maintaining terminal strength, solderability and electrical performance. This technology directs board flex stress away from the ceramic body and into the termination area. As a result, this termination system mitigates the risk of low-IR or short-circuit failures associated with board flex. All FT-CAP products meet the requirements of the Automotive Electronics Council AEC-Q200-REVC and come with 100% pure matte, tin-plated terminations for superior solderability. All parts are environmentally friendly in compliance with RoHS legislation and are capable of PB-free reflow profiles.

Electrical Parameters:

- Operating Range: -55°C to +125°C, with no-bias capacitance shift limited to ±15% over that range.
- Insulation Resistance (IR) measured after 2 minutes at rated voltage @ 25°C: Limit is 500 megohm microfarads or 100,000 MΩ, whichever of the two is smaller.
- Capacitance and Dissipation Factor (DF) measured under the following conditions: 1kHz and 1 Vrms if capacitance ≤10μF120Hz and 0.5 Vrms if capacitance > 10μF
- DF Limits are: 50 to 200 Volts - 2.5%; 16 to 25 Volts - 3.5%; 6.3/10Volts - 5.0%
- AEC-Q200 REV.C - Automotive

Advantages over Standard Termination MLCC:

- Significantly reduces catastrophic and potentially costly failure event due to board flex.
- Greatly reduces the likelihood of a low-IR or short-circuit condition in a board flex situation.
- Channels flex stress to the end terminations (Flexible Termination).
- Allows for up to 5mm of board flex capability (Flexible Termination).



The Flex Crack is moved into the end termination, away from the electrodes; significantly reducing the risk of short circuit failure due to flex.

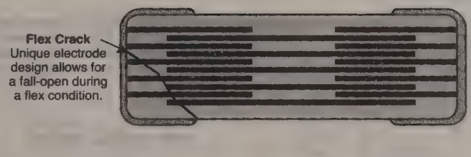
FAIL-SAFE FLOATING ELECTRODE MLCC/FE-CAP

The FE-CAP is a surface mount multilayer ceramic capacitor which utilizes a floating internal electrode design, wherein the electrodes are configured to form multiple capacitors in series within a single MLCC package. This not only yields improved voltage and ESD performance over standard designs, but also mitigates the risk of low-IR or short-circuits failures that can occur due to board flex. The FE-CAP is being offered in case sizes ranging from EIA 0402 to EIA 1812 with rated voltages ranging from 6.3VDC to 250VDC. Combined with the stability of an X7R dielectric, the FE-CAP offers a flex-robust solution at low to mid-range capacitance values and an operating temperature range of -55°C to +125°C with zero bias capacitance shift limited to ±15% over that range. These components are widely used in critical application where mechanical stress is a concern. When flexed to mechanical failure the floating electrode design of the FE-CAP eliminates the current path between positive and negative poles. Absence of this current path reduces the probability of a short-circuit condition. All FE-CAP products meet the requirements of the Automotive Electronics Council's AEC-Q200-Rev C and come with 100% pure matte, tin-plated terminations for superior solderability. All parts are environmentally friendly, in compliance with RoHS legislation and are capable of Pb-free reflow profiles.



Flex Crack
Unique electrode design allows for a fail-open during a flex condition.

KEMET High Capacitance Ceramic Chip Capacitors

RoHS Compliant **This page of product is compliant.**

KEMET HICV MLCC

Higher Capacitance, Higher Value

KEMET Electronics is the preferred capacitor supplier to the world's most demanding customers. KEMET is dedicated to meeting and exceeding the industries ever increasing High Capacitance needs through continuous enhancement & expansion of their High CV MLCC portfolio.

RoHS Compliant

The operating temperature range of these capacitors is between -55°C and +85°C for the X5R MLCC and between -55°C and +125°C for the X7R MLCC, with zero bias capacitance shift limited to ±15% over those ranges. EIA case sizes 0402 and 1210 are suitable for reflow soldering only. All parts incorporate KEMET's standard barrier layer of pure nickel with an overplate of pure tin to provide excellent solderablility as well as resistance to leaching. EIA case sizes 0603 up to 1206 are suitable for reflow and wave soldering. All parts are environmentally friendly, in compliance with the RoHS legislation.

KEMET TIP AND RING SMD CERAMIC CHIP CAPACITORS

KEMET's 250 VDC or Tip & Ring MLCC capacitors are designed and rated for telecommunication ringer circuits where the capacitor is used to block -48 to -52 Volt DC of line voltage and pass a 16-25 Hz AC signal pulse of 70 Vrms to 90 Vrms. The surface mount ceramic capacitors are excellent replacements for high voltage leaded film devices. The smaller SMT footprints save valuable board space which is critical when creating new designs, and the capacitors are able to withstand today's higher lead-free reflow processing temperatures. The ceramic MLCC have excellent high frequency filtering characteristics, low ESR, and high temperature reflow capabilities. KEMET Tip and Ring capacitors are available in standard EIA case sizes and standard capacitance values from 0.001ÌF to 1.2ÌF. The capacitors have pure tin (100% Matte Sn) plated terminations and are 100% lead free which is ideal for new environmentally demanding designs.

KEMET SMD HIGH VOLTAGE CERAMIC CAPACITORS

KEMET's High Voltage Surface Mount Capacitors are designed to withstand high voltage applications. They offer high capacitance with low leakage current and low ESR at high frequency. The capacitors have pure tin (Sn) plated external electrodes for good solderability. X7R dielectrics are not designed for AC line filtering applications. An insulating coating may be required to prevent surface arcing. These components are RoHS compliant.

Applications:

- Switch mode power supply
- Input filter
- Resonators
- Tank circuit
- Snubber circuit
- Output filter
- High voltage coupling
- High voltage DC blocking
- Lighting ballast
- Voltage multiplier circuits
- Coupling capacitors/CUK

Application Note:

- Input side filtering (power plane/bus)
- High current applications (battery line)
- Circuits that cannot be fused to open when short circuits occur due to flex cracks

Features (Exceptions):

- 0805 Thickness target: .9mm (104 Cap Code=1.25mm)
- 1206 Thickness target: .9mm (474 and 105 Cap Code=1.6mm)
- 1210 Thickness target: 100v (474 Cap Code=1.85mm)

  100V, 105 Cap Code=2.0mm

Electrical:

- X7R dielectric contains the following requirements based on room temperature (25°C) parameters:
- Operating Range -55°C to 125°C, with no-bias capacitance shift limited to ±15% over that range
- Capacitance and Dissipation Factor(DF) measured at 1kHZ and 1 Vrms with no bias
- DF Limit:2.5%
- Insulation Resistance (IR) measured after 2 minutes at rated voltage
- IR Limit: 1,000 megohm microfarads or 100 gigohm, whichever is less. KEMET's Open-Mode capacitors meet the stringent requirements of the Automotive Electronics Council's AEC-Q200-Rev B.

Markets:

- Automotive
  - all applications connected directly to the battery
  - conversions to 42V power system
- Power Conversion
  - raw power input side filtering

Benefit:

- In a flex-crack situation the part does not fail as a short
  - Tested 500 pcs (5 PNs, 20 batches) without an IR Failure
- Minimizes the potential for a catastrophic failure event

MURATA Low ESL Ceramic Chip Capacitors

RoHS Compliant **This page of product is compliant.**

LLL SERIES - STANDARD TWO TERMINAL REVERSED GEOMETRY LOW ESL TYPE

Murata offers a standard profile and low profile low inductance series of capacitors. Murata's Low ESL product line up includes the standard 2 terminal, reversed geometry type, (LLL Series), Eight (8) terminal type (LLA Series) and Ten (10) terminal type (LLM Series). These three series are plated with Ni and Matte Sn, and are RoHS compliant. Murata's Low ESL series provide high capacitance in small case sizes. The Low ESL series is especially ideal for high-speed microprocessors and high frequency digital equipment.

Features:
- Low ESL: 150 to 250pH. Suitable for noise reduction at high frequencies (> 200MHz).
- Operating Temperature: **X7R:** -55°C to 125°C w/ a ±15% cap change over temperature range.
  X7S: -55°C to 125°C w/ a ±22% cap change over temperature range.
  X6S: -55°C-to 105°C w/ a ±22% cap change over temperature range.

MURATA Low ESL Ceramic Chip Capacitors

RoHS Compliant **This page of product is compliant.**

Murata offers a standard profile and low profile low inductance series of capacitors. Murata's Low ESL product line up includes the standard 2 terminal, reversed geometry type, (LLL Series), Eight (8) terminal type (LLA Series) and Ten (10) terminal type (LLM Series). These three series are plated with Ni and Matte Sn, and are RoHS compliant. Murata's Low ESL series provide high capacitance in small case sizes. The Low ESL series is especially ideal for high-speed microprocessors and high frequency digital equipment.

LLA SERIES - EIGHT TERMINAL LOW ESL TYPE

Features:
- Low ESL: 80 to 120pH. Suitable for high speed (800MHz to 4GHz) IC decoupling.
- Operating Temperature: **X7R:** -55°C to 125°C w/ a ±15% cap change over temperature range.
  X7S: -55°C to 125°C w/ a ±22% cap change over temperature range.

MURATA Hi-Cap Multilayer Ceramic Chip Capacitors

RoHS Compliant **This page of product is compliant.**

Hi-Cap: The Murata Hi-Cap, Tantalum replacement product lineup is available in X7R, X6S, X7S, and X5R with capacitance of 1μF and larger. This line of high volumetric capacitance ceramic chip capacitors is available in 4V, 6.3V, 10V, 16V, 25V, and 50V. This product series (GRM) is offered with a Nickel (Ni) barrier termination plated with Tin (Sn), and is RoHS compliant. Stringent dimensional tolerances allow highly reliable, high-speed automatic chip placement on PCBs.

Why use ceramic chips over Tantalum and Aluminum capacitors? Ceramic chips offer better reliability, performance, no polarity, and allow design engineers to downsize designs with various package options from 0402 X5R 1μF to 1210 X5R and X6S 100μF. This line of high volumetric multilayer capacitance ceramic chip capacitors (MLCC) has excellent high frequency noise absorption performance compared to Tantalum and Aluminum caps. For bypass/decoupling applications, MLCC is equivalent to 1/2 to 1/5 the capacitance value of a Tantalum capacitor because impedance (ESR) of MLCC is lower at higher frequencies, above 100kHz. Consider Murata Hi-Cap as your Tantalum capacitor replacement.

Recommended Capacitance of MLCC for Tantalum Cap. Replacement

Depending on the operating frequency, MLCC is equivalent to 1/2 to 1/10 Capacitance value of Tantalum Cap. Because impedance (ESR) of MLCC is lower than Tantalum Cap. Refer to the impedance curve graph below.

Tantalum Cap.	MLCC Recommended Cap.
1μF	0.1 to 0.47μF
2.2μF	0.22 to 1μF
4.7μF	0.47 to 2.2μF
10μF	1 to 4.7μF
22μF	2.2 to 10μF
47μF	4.7 to 22μF
100μF	10 to 47μF
220μF	22 to 100μF

RoHS Compliant

Impedance Curve of MLCC

It is important that capacitor's impedance is lower at ripple noise frequency.

SYFER FLEXICAP™ SMD Ceramic Capacitors

SYFER CAPACITORS

SYFER'S FlexiCap™ Ceramic Surface Mount Capacitor technology was developed to provide improved resistance to the risk of mechanical stress cracking in ceramic chip capacitors.

Features:
- Allows a greater degree of PCB deflection, typically twice that of standard MLCC's
- FlexiCap termination does not affect electrical characteristics or performance of the devices which can be used with no changes to the manufacturing process
- More resistant to temperature cycling

Specifications:
- Operating range: -55°C to +125°C (max. capacitance change: ±15%)
- Insulation resistance: 100 gigohm or 1000s, whichever is less
- Dissipation Factor: < 0.025
- Dielectric strength with voltage applied for 5 seconds: ≤ 200 Volts: 2.5 times; 500 & 630 Volts: 1.5 times; ≥ 1 kV: 1.25 times

Markets:
- Power Supplies: DC-DC Converters, UPS systems
- Telecom: Backplanes, linecards, modems, and base stations
- Lighting ballasts
- Industrial

Applications:
- Can be used in all designs currently using standard MLCC's
- Suggested for high stress, critical circuit applications

A predominant failure mode in multilayer ceramic capacitors is cracking caused by board flexure that results in capacitance loss, leakage, and high current shorts. A short circuit condition can cause further failures of downstream components.

Extensive board flexure testing was performed on OMD-Capacitors soldered onto glass epoxy resin boards. The boards were then subjected to 8, flexure (see diagram above) and the Insulation Resistance (IR) of each capacitor was measured. IR remained >100ΩF in all cases because these designs do not allow cracks to bridge across opposing electrodes creating conductive pathways. Commercial grade product may experience a serious loss in IR and eventually short when tested under the same conditions.

AVX Disc Ceramic Capacitors

AVX
A KYOCERA GROUP COMPANY

RoHS Compliant **This page of product is compliant.**

DIELECTRIC CLASS II

These ceramic capacitors have a high dielectric constant, which makes high capacitance values in reduced dimensions possible. The temperature coefficient and loss factor are, however, greater than Class I.

- Typical applications are decoupling and bypass.
- Meets IEC 389-9 (1996)

RoHS Compliant

AVX Medium Power Film Capacitors

FFB SERIES

The FFB series uses a non-impregnated metallized polypropylene or polyester dielectric with the controlled self-healing process, specially treated to have a very high dielectric strength in operating conditions up to 105°C.

Applications:
- The FFB capacitor is particularly designed for DC filtering, low reactive power.

Features:
- Self-extinguishing plastic case (V0 = in accordance with UL 94) filled thermosetting resin.

Electrical Characteristics:
- Tolerance on Cn: ±10%
- Dielectric:
  75 to 400V Rated DC Voltage = polyester
  525 to 1100V Rated DC Voltage = polypropylene
- Working Temperature: -55°C to +105°C

Lifetime Expectancy:
One unique feature of this technology (as opposed to electrolytics) is how the capacitor reacts at the end of its lifetime. Whereas, with an electrolytic, there is a strong risk of explosion of the case. However, with AVX line of film capacitors, the capacitor will simply experience at the end of life a loss of capacitance of about 2%, with no risk of explosion.

Please note that this theoretical, however, as the capacitor continues to be functional even after this 2% decrease.

CORNELL DUBILIER Polyester Film Capacitors

RoHS Compliant **This page of product is compliant.**

DME SERIES - MINIATURE METALLIZED POLYESTER CAPACITORS

Type DME radial-leaded, mini-dipped capacitors deliver the performance of other capacitors which have cases that are twice as big. Improvements in film technology permit the use of thinner dielectric and make DME the choice for all but higher current AC applications where the larger size may be an advantage. DME self heals shorts caused by overvoltage transients. For small size and low cost, DME is tops.

Specifications:

- Voltage range: 100-1000VDC (65-250VAC)
- Capacitance range: .01-10μF
- Capacitance tolerance: ± 10%
- Operating temperature range: -55°C to 125°C full-rated voltage @ 85°C - Derate linearly to 50% - rated voltage @ 125°C
- Dielectric strength: 150%
- Dissipation Factor: 1% max.
- Insulation resistance: 3,000MΩ x μF
  9,000MΩ min.
- Life test: 1,000 hours at 85°C @ 125% rated voltage

Features:

- Significant size reduction and performance characteristics comparable to other film capacitors that are in larger case sizes
- DME self heals shorts caused by overvoltage transients
- Small size/low cost

RoHS Compliant

VISHAY SMD Silicon-Based Capacitors

RoHS Compliant This page of product is compliant.

VISHAY HPC0402A, HPC0603A SERIES HIGH FREQUENCY INTERGRATED SILICON CAPACITORS

High Performance, High Precision

In the last decade or two, semiconductor production has been greatly refined in materials, processes, producibility, cost reduction, repeatability, reliability, and simplicity. In contrast, there have been few significant innovative advances in passive components. So the search for a significant advance in a high Q, high frequency capacitor centered on the semiconductor processes instead of the traditional capacitor processes. The resultant product yields a true RF capacitor with a ten-fold increase in capacitance density based on simple, low cost, high reliability semiconductor processes, and on materials economically available throughout the world.

Features:

- New technology surface mount capacitor based on a special semi-conductor process
- Construction reduces the parasitic inductance and brings the SRF values to ultra-high frequencies
- Capacitance is extremely stable in a wide range of frequencies from 1MHz to several GHz
- High Q and low ESR
- Tight tolerance to ± 1% or 0.05pF
- Ultra high SRF
- Low parasitic inductance
- Capacitance range: 0.1pF to 180pF

Electrical Specifications:

- Operating Temperature: -55°C to + 125°C
- Temperature Coefficient of Capacitance (TCC): 0 ± 30ppm/°C
- Insulation Resistance: 10 (11)Ω min
- Voltage: 2.5 x rated voltage for 5 seconds
- Ageing: none

Environmental Specifications:

- Life Test: 1000 hours, + 125°C @ 2 x rated voltage
- Thermal Shock: 5 Cycles, -55°C/+ 125°C
- Moisture Resistance: 240 hours, 85% RH, + 85°C

Applications:

- Wireless communications
- Mobile phones
- Cordless phones
- GPS
- VCO
- Filter Networks

AVX Niobium Oxide Capacitors and Supercapacitors

AVX NIOBIUM OXIDE CAPACITORS

Cost versus performance is a key requirement for consumer electronic products. A new solid electrolyte capacitor OxiCap has been developed by AVX in standard EIA case sizes in order to meet this requirement as a higher performance alternative to aluminum and other SMD capacitor technologies currently on the market. The OxiCap non-burn technology is based on NbO niobium oxide ceramic material as the anodic material processed through the same manufacturing process as tantalum capacitors. Electrical parameters are similar to generic standard and low ESR tantalum. The laser coded orange molded body gives total traceability.

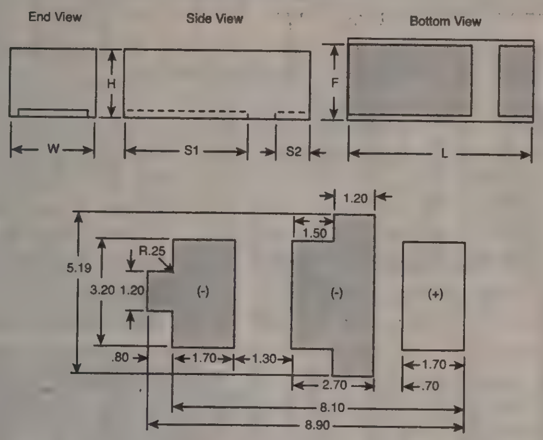
T528 Series Z Case Size



Facedown 7343-17 will NOT fit on standard 7343 solder pads, and movement along Z axis could result in a short. Three-pad design must be used with center pad connection to circuit for low ESL properties. Dual pads on cathode connection required to prevent solder lifting with one cathode pad, and for mechanical hold. Will fit on Sanyo TPL pad specification - all dimensions equal except for .80mm tab extension at left cathode (-) plate as shown above.

KEMET Conductive Polymer Chip Capacitors

The Capacitance Company
KEMET
CHARGED.

RoHS Compliant **This page of product is compliant.**

T520 SERIES - 105°C LOW ESR, KO-CAP

KEMET has developed a new type of tantalum capacitor that replaces the solid manganese dioxide electrode with a solid conductive polymer. This product is named the KO-CAP for KEMET Organic Capacitor. The advantages of the polymer include very low ESR and elimination of the potentially catastrophic failure mode that may occur with standard tantalum capacitors in a high surge current application.

Features:

- Polymer Cathode Technology
- Low ESR
- High Frequency Cap Retention
- No-Ignition Failure Mode
- EIA Standard Case Sizes
- 100% Surge Current Tested
- 20% tolerance

RoHS Compliant

Electrical Specifications:

- Operating Temperature Range: -55°C to +105°C
- Voltage listed is at 85°C, Derate 25% at 105°C
- Reverse Voltage Rating & Polarity:
  Polymer tantalum capacitors are polar devices and may be permanently damaged or destroyed if connected in the wrong polarity. The positive terminal is identified by a laser-marked stripe and may also include a beveled edge. These capacitors will withstand a small degree of transient voltage reversal for short periods. Please note that these parts may not be operated continuously in reverse.

KEMET Conductive Polymer Chip Capacitors

RoHS Compliant **This page of product is compliant.**

The Capacitance Company
KEMET
CHARGED.™

RoHS Compliant

T525 AND T530 SERIES - 125°C LOW ESR, KO-CAP

KEMET has developed a new type of tantalum capacitor that replaces the solid manganese dioxide electrode with a solid conductive polymer. This product is named the KO-CAP for KEMET Organic Capacitor. The advantages of the polymer include very low ESR and elimination of the potentially catastrophic failure mode that may occur with standard tantalum capacitors in a high surge current application.

Features for T525:

- Polymer Cathode Technology
- 125°C Maximum temperature capability
- High frequency capacitance retention
- Non-ignition failure mode
- Halogen free epoxy
- Use up to 90% of rated voltage (10% derating) for part types ≤ 10 volts
- Use up to 80% of rated voltage (20% derating) for part types. 10 volts
- Operating Temperature Range: -55°C to +125°C
- 100% Accelerated steady state aging
- 100% Surge current testing
- Self-healing mechanism
- Volumetrically efficient
- Extremely stable ESR at 125°C
- EIA standard case size
- RoHS Compliant/Leadfree Termination

Features for T530:

- Highest CV in Standard EIA Size
- Extremely low ESR
- 125°C Max, temperature capability
- Polymer Cathode technology
- High frequency capacitance retention
- Non-Ignition failure mode
- Molded case (pick-and-place precision)
- 100% Accelerated steady state aging
- 100% Surge current testing
- Utilizes multiple tantalum anode technology
- Volumetric efficiency
- Use up to 90% of rated voltage (10% Derating)
- Self-healing mechanism

KEMET T49 Series Low Profile SMD Tantalum Capacitors

The Capacitance Company
KEMET
CHARGED.

RoHS Compliant **This page of product is compliant.**

The Low Profile HICV X5R series is designed for handheld and miniaturized electronics applications where the height of the components is a key design consideration. The maximum height for the new low profile EIA 0805 case size components is 0.95mm. Primary end use applications for the Low Profile HiCV MLCCs include LCD modules, mini-HDD, DSC, IC Cards, Smart Cards, PMCIA cards, MP3 players, and other portable electronic devices.

Newest capacitance values are available in the X5R dielectrics. The operating temperature range of the X5R capacitors is between -55°C and +85°C, with the zero bias capacitance shift limited to ±15% over those ranges. All parts are environmentally friendly, in compliance with RoHS legislation and are capable of Pb-free reflow profiles.

Features:

- Meets or exceeds EIA Standard 535BAAC
- taped and Reeled per EIA 481-1
- Symmetrical, Compliant Terminations
- Optional Gold Plated Terminations
- Laser-marked Case
- Refer to KEMET F3102 for performance characteristics and component packaging
- Capacitance: 1.0μF to 330μF
- Tolerance: ±10%, ±20%
- Voltage: 4 - 50 VDC
- Halogen Free Epoxy

T491 SERIES SOLID TANTALUM CHIP CAPACITORS

KEMET's family of solid tantalum chip capacitors is designed and manufactured with the demanding requirements of surface mount technology in mind. These devices extend the advantages of solid tantalum technology to today's surface mount circuit applications. Complementing multilayer ceramic chip convenience with capacitance ratings through 1000 µF, tantalum chip capacitors permit circuit designers to take full advantage of the benefits of surface mount technology.

T491 series are industrial grade solid chip capacitors. The standard solder-coated terminations provide excellent wetting characteristics and compatibility with today's surface mount solder systems. The symmetrical terminations offer total compliancy to provide the thermal and mechanical stress relief required in today's technology. Lead frame attachments to the tantalum pellet are made via a microprocessor-controlled welding operation, and a high temperature silver epoxy adhesive system. Standard packaging of these devices is tape and reel in accordance with EIA 481-1. This system provides perfect compatibility with all tape-fed placement units.

Specifications:

- **General Application Class:**
  Solid tantalum capacitors are usually applied in circuits where the AC component is small compared to the DC component. Typical uses include blocking, by-passing, decoupling, and filtering. They are also used in timing circuits. If two of these polar capacitors are connected "back-to-back" (i.e., negative-to-negative or positive-to-positive), the pair may be used in AC application (as a non-polar device).
- **Operating Temperature Range:** -55°C to +125°C
- **Non-Operating Temperature Range:** -55°C to +125°C
  Tantalum capacitors do not lose capacitance from the "de-forming" effect as do liquid-electrolytic capacitors. Storage at high temperature may cause a small, temporary increase in leakage current (measured under standard conditions), but the original value is usually restored within a few minutes after application of rated voltage.
- **Capacitance:** 0.1µF to 1000µF
  Capacitance is measured at 120Hz, up to 1.0 volt rms maximum and up to 2.5 volts DC maximum, at +25°C. DC bias causes only a small reduction in capacitance up to about 2% when full rated voltage is applied.

Features:

- Meets or Exceeds EIA Standard 535BAAC
- Taped and Reeled per EIA 481-1
- Symmetrical, Compliant Terminations
- Optional Gold-plated Terminations
- Laser-marked case
- 100% Surge current test on C, D, X sizes
- Tolerance: ±10%, ± 20%

KEMET Tantalum Capacitors

"ULTRA DIP II" TANTALUM CAPACITORS, 10% TOLERANCE

The KEMET "Ultra Dip II" Series, miniature dipped solid tantalum capacitors, provide the designer with the advantage of compactness plus low leakage and low DF performance characteristics for filtering, bypassing, coupling, blocking and RC timing circuits. The plastic case provides a tough barrier coating and maintains precision of lead wire spacing within ±0.015 inch. The gold color epoxy utilized permits laser marking with outstanding permanency and legibility. All case sizes are printed with capacitance, voltage, polarity, and vendor identification. Solid tantalum devices exhibit no degradation failure mode during shelf storage and show a constantly decreasing failure rate (i.e., absence of wearout mechanism) during life tests. The "UltraDip II" Series provides self-insulation cases which are resistant to shock and vibration. These capacitors exhibit low DCL, ESR and Impedance and have excellent temperature stability. Voltages listed are at 85°C. Derate voltage 33% at 125°C.

RoHS Compliant

"ULTRA DIP II" TANTALUM CAPACITORS, 10% TOLERANCE

RoHS Compliant

The KEMET "Ultra Dip II" Series, miniature dipped solid tantalum capacitors, provide the designer with the advantage of compactness plus low leakage and low DF performance characteristics for filtering, bypassing, coupling, blocking and RC timing circuits. The plastic case provides a tough barrier coating and maintains precision of lead wire spacing within ±0.015 inch. The gold color epoxy utilized permits laser marking with outstanding permanency and legibility. All case sizes are printed with capacitance, voltage, polarity, and vendor identification. Solid tantalum devices exhibit no degradation failure mode during shelf storage and show a constantly decreasing failure rate (i.e., absence of wearout mechanism) during life tests. The "Ultra Dip II" Series provides self-insulation cases which are resistant to shock and vibration. These capacitors exhibit low DCL, ESR and Impedance and have excellent temperature stability. Voltage rated at 85°C. Derate voltage 33% at 125°C.

Available in various lead configuration, tolerances, and packaging. Contact a Mouser Sales Representative for more information.

KEMET Tantalum Capacitors

T322 SERIES, TANTALUM, MOLDED AXIALS, 10% TOLERANCE

These capacitors offer an extremely high capacitance-to-volume ratio while still maintaining excellent performance. Ideally suited for use in printed wiring boards and all applications requiring a high degree of packaging density.

Typical applications include decoupling, blocking, bypassing and filtering in commercial computers, data processing, communications, and other electronic equipment. The low ESR/impedance at high frequencies offered by this capacitor is especially suitable for decoupling required by high speed computers. Voltage rated at 85°C. Derate voltage 33% at 125°C.

RoHS Compliant

VISHAY / SPRAGUE Wet Tantalum Capacitors

VISHAY 135D WET TANTALUM CAPACITORS

Model 135D tantalum-case tantalum electrolytic capacitors incorporate the advantages of all the varieties of electrolytic capacitors and eliminate most of the disadvantages. These units have a 3 volt reverse voltage capability at +85°C and a higher ripple current capability than any other electrolytic type with similar combinations of capacitance and case size. Model 135D capacitors are commercial equivalents of Military Style CLR79 and CLR81, designed to meet the performance requirements of Military Specification MIL-C-39006/22/25.

CRYSTEK Chipset Crystals and Oscillators

CHIPSET CRYSTALS AND OSCILLATORS

Crystek Crystals Corporation has worked with Chipset manufacturers to develop crystal and oscillator solutions that are compatible with their specific Chipsets.

As with all design work it is sometimes necessary to alter the frequency for a customer specific application and the engineering team at Crystek is available to assist with crystal and oscillator design modifications. The list of product below are the Qualified and Recommended Crystals and Oscillators for these specific Chipsets shown. Other Chipset reference designs are available. Contact a Mouser Sales Representative for more information.

AMD Application: PDA's, Web Tablets, Portable and Wired Internet Access Devices, and Gateways
